Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This is the non-final Office Action for the serial number 10/757,535, T-Connector Holding Tool and Method, filed on 1/15/04.

The allowable claim 10 has been withdraw in view new ground of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10 and 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent # 2,649,824 to Maxwell and in view of US Patent # 3,988,918 to Crees.

Maxwell teaches a tool comprising a handle (10) and a mounting lug (cylinder portion adjacent to handle) having a square drive (9). The mounting lug includes a cylindrical end portion. The tool comprises a head (5) having a cylindrical body with a bore (8) defined therein. The mounting lug is being removably inserted into the bore in order to attach the head to the handle. The tool further comprises first and second claws (2) attached to the cylindrical body in parallel, spaced relation and having a pair of jaws (14). The bore extends axially/transversely through the cylindrical body. The claws have smooth, arcuate and cylindrical interior surface (hole for connecting to element 5).

Art Unit: 3632

Maxwell teaches the handle but fails to teach the handle comprises grip. Crees teaches the handle (82) comprising grip. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have added grip to Maxwell's handle as taught by Crees to provide gripping force on the tool to prevent from letting the tool to slip out of human's hand.

Art Unit: 3632

Allowable Subject Matter

Claims 12 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art fails to teach the square drive further comprises a spring-biased ball bearing extending from the square drive.
